/note="Vector: pBRcDNASfiAB; The library was constructed
from 10 different sources of RNA from a single genotype.
Separate cDNAs were generated using primers that
incorporated unique 5' and 3' tags to distinguish each
source of RNA. cDNAs were then pooled, size-fractionated
directionally cloned into a custom medium-copy vector and
transformations made with four size classes to minimize
size bias. Details of each source of RNA and library
construction can be obtained at http://cgpdb.ucdavis.edu/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      429 AGATCTGCAAGAAAGTATGGCGAACCGACGCCGCAGGCGTTGCTGGAATCTGCCATGCG 488

The present sequence is the genome sequence of Listeria monocytogenes BEGD-e. This sequence and fragments of this sequence are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and to study genetic polymorphisms and other genomes. Proteins (ABB47297-ABB50149) expressed from the present sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and biodegradation, especially biosynthesis of Vitamin B12. This sequence and proteins encoded by it are also useful for selecting compounds that monocytogenes-related diseases. In addition, this sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. monocytogenes and related

The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be
                                                                                                                                                                                                                                                                          AGAGATCAAAGTCGGTTTCGATATTTTGAAATCGCTGCGTATCCGTTCGCGAGGGATCAA

The present invention relates to nucleic acid sequences (AB067188-AB071212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                              New genomic sequences from Listeria species, useful for detection treatment and prevention of infection, also related polypeptides,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to nucleic acid sequences (AB067188-AB071212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in

The invention describes a method of monitoring differential expression of genes in a first Bacillus cell relative to expression of the genes in other Bacillus cells, comprising hybridaing labelled nucleic acid probes is isolated from Bacillus cells to a substrate containing array of Bacillus closed expression by an observed hybridisation reporter signal of a spot in the array. The method is useful for measuring the expression of genes in a first Bacillus cells. The method is useful for monitoring containing array of same genes in one or more second Bacillus cells. The method is useful for monitoring genes in one cor more second Bacillus cells. The method is useful for monitoring containing containing cells about the same genes in one or more second Bacillus cells. The method is useful for monitoring gene copy number variations of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way or in which Bacillus cells adapt to changes in culture conditions, in which Bacillus cells adapt to changes in culture conditions, conviconmental stress or other physiological provocation. Extensive conviconmental stress or other physiological provocation. Extensive conditions to expense or one open reading frame, since sequence information is available. This sequence represents a genomic sequence tag (GST) used in the method of the invention.

                                                                                                                                        ò
                                                                                                                                                                  셤
                                                                                                                                                                                               ò
                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical insolates involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in chagnostics, forenaics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   688
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             703
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       570

The present invention describes a polynucleotide (I) comprising a sequence of a Bifidobacterium genome selected from the nucleotide sequences given in ABQ81842 and ABQ81843, or a sequence exhibiting at least 90% identity or which hybridises with the sequence given in ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding a fusion protein, comprising a sequence selected from 1097 sequences given in ABP6528 to ABP66354 ligated in frame to a polynucleotide encoding a heterologous polypepide. (I) has antidiarrheic and antibacterial activities, and can be used as an inhibitor of Salmonella. (I) which is a probe) is useful for the detection and/or identification of Bifidobacterium longum in a biological sample. A carrier containing the lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be used for preventing and/or treating diarrhoea brought about by pathogenic bacteria and/or rotavirus. The carrier is a food composition selected from milk, yogurt, curd, cheese, fermented milks, milk based for mank.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a Moraxella catarrhalis genomic library comprising of a combination of 41 nucleic acid molecules (see AAF28514-AAF28554). The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial flora of human upper airways. M. catarrhalis is known to cause acute, localised infections such as otttis media, sinustis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                         sinusitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 CCGATTGGCGATGGTGCTCCCATCGCCGTACAGTCCATGACCAATACGCGTACGACAGAC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present inventories a year (1) defined base pair any present inventories a year (1) defined base pair sequence selected from a table of sequences found in the Buchnera sp. genomic DNA of ABA92787 given in the specification or is a DNA selected from complementary DNA sequences, and (b) is a DNA which hybridises with the DNA (a) and encodes a protein. Also described are: (1) a recombinant vector (II) containing (I); (2) a transformant (III) containing (II); (3) a genomic DNA of Buchnera sp. containing the sequence given in ABA92787; (4) a plasmid derived from buchnera sp. containing DNA (c) or (d), (c) is a DNA containing a fully defined sequence given in ABA92789 and (d) is a plasmid which hybridises with a DNA; and (5) a method for the preparation of a protein in which (III) is cultured and the expression protein of the objective protein is collected from the resultant culture. The DNA is useful for developing agricultural chemicals for exterminating cockroaches. The presents

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags (Cridentifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical ciscorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to be a produce other types of data and products dependent on DNA and contact the polypeptide and polynucleotide sequences have applied to DNA and and contact the polypeptide and polynucleotide sequences have applied to more applied to the contact types of data and products dependent on DNA and and contact the contact th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2496 GTGGGGGCGCACGGGCAGGTAAAATCCCCA-TGGTTAAGGTCTGCTGCTGTCTGAAGGCA 2554
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           diagnostic coding sequences of the invention.
Note: The sequence data for this patent did not appear in the printed
specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            635 GIGCGCGCGCGCGCGCAGIAAAAICCGCCATIGGITIAGGICIGCIGCIGTCTGAAGGCA

                                                                                                                                        9
                                                                                                                                                          9
         used as or primers. The recombinant vectors are used in plant transformation or transfection. gcpE an also act as markers capable of detecting polymorphisms such as single nucleotide polymorphisms (SNPs). gcpE is also used to determine the level or pattern of expression of the protein. The present sequence is Escherichia coli gcpE gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents the complete genome sequence of the bacterium Haemophilus influenzae strain Rd. The invention relates to a computer readable medium (CRM) having recorded upon it the complete H.influenzae nucleotide sequence (1), a representative fragment of (1) or a nucleotide sequence at least 99% identical to (1). By providing the full-length genomic sequence in a computer readable form, it is possible to identify commercially important nucleic acid fragments and expression modulating fragments (EMFs) of the Haemophilus genome. The EMFs can be used to regulate the expression of a nucleic acid molecule. Vectors and altered organisms comprising the predicted ORFs can be used to produce any of the polypeptide fragments of the H. influenzae Rd genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      other;

The invention relates to gcpE nucleic acid molecule, an essential gene of methyl-D-erythritol phosphate (MEP) pathway) that encodes rice, Arabidopsis thaliana or Escherichia coli GCPE protein. gcpE is useful for producing a transgenic plant such as Brassica campestris, B. napus, canola, castor bean, coconut, cotton, crambe, lineed, maize, mustard, oil palm, peanut, rapeseed, rice, safflower, sesame, soybean, sunflower, or wheat with an increased isoprencial (tocopherol) compound level. The expression of GCPE protein in organisms increases the level of tocopherol substrate such as isopenryl diphosphate and dimethylallyl diphosphate biosynthesis. Transgenic organisms overexpressing GCPE protein can nutritionally enhance food and feed sources. Overexpression of GCPE protein in transgenic plant may provide tolerance to stresses of grgs protein in transgenic plant may provide tolerance to stresses or grg., oxidative stress tolerance such as a to oxygen or ozone, UV colerance, etc. gcpE may be used to obtain nucleic acid molecules from

This invention describes a novel method for incorporating gopE and yfgB genes into viruses and cells for increasing isoprenoid content and identifying e.g. antimicrobial agents, comprises using DNA sequences (I) from the gopE or yfgB genes of bacteria or parasites or DNA sequences (II) which hybridize to the specified genes or encode a plastid protein with the same biological activity as those encoded by the genes. The invention also describes (I) plant cells containing (I) or (II); (2) transformed plant cells, and transgenic plants regenerated from them, that contain (I) or (II); (3) determining the enzymatic activity of a gopE protein; or (4) screening compounds (A) that have antimycotic, antiparasitic or antiviral activity in humans or animals or antiviral, are used: (i) to increase the isoprenoid levels in viruses and (II) are used: (i) for determining the enzymatic activity of gopE and yfgB proteins;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 3; Page 13-15; 36pp; German.

             As a contraction of an essential gene or of its function provides the key for antibacterial therapy. The invention provides methods for identifying such antagonists or inhibitors. These involve contacting a bacterial cell comprising an essential gene with a candidate antagonist or inhibitor, and testing whether contact leads to coll growth inhibition and/or cell death. The method allows the development of new broad spectrum antibiotics. A conditional mutant of an essential gene can be used to induce a lethal phenotype in

                                                                                                      The present invention relates to antagonists and inhibitors of 24 bacterial 'genes and proteins. The proteins are thought to be essential for growth in several species of bacterial (including S. pneumoniae, B. burgdorferi, H. influenza and H. pylori). The proteins and coding sequences shown in the specification can be used to identify antagonists and inhibitors which can be used in disease treatment and pesticides. In particular, they can be used against M. tuberculosis. The present sequence is one of the genes of the invention.
                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                     9

These 22 genes fulfil criteria for being attractive antibacterial targets: hypothetical open reading frames coding for essential functions (mutation is lethal for growth in rich media); broad conservation (orthologues are present in a wide range of bacteria, including Haemophilus influenzae, Streptococcus pneumoniae, Helicobacter pylori and Borrelia burgdorferi); and low toxicity
                                                                                                                                            ATCGGTACGGTTAACGCGCTGGAGCAACGCCTGGAAGATATCATCACTCCGATGGACGTT
